

Mind Graph

Motivation, Requirements, and Prototype

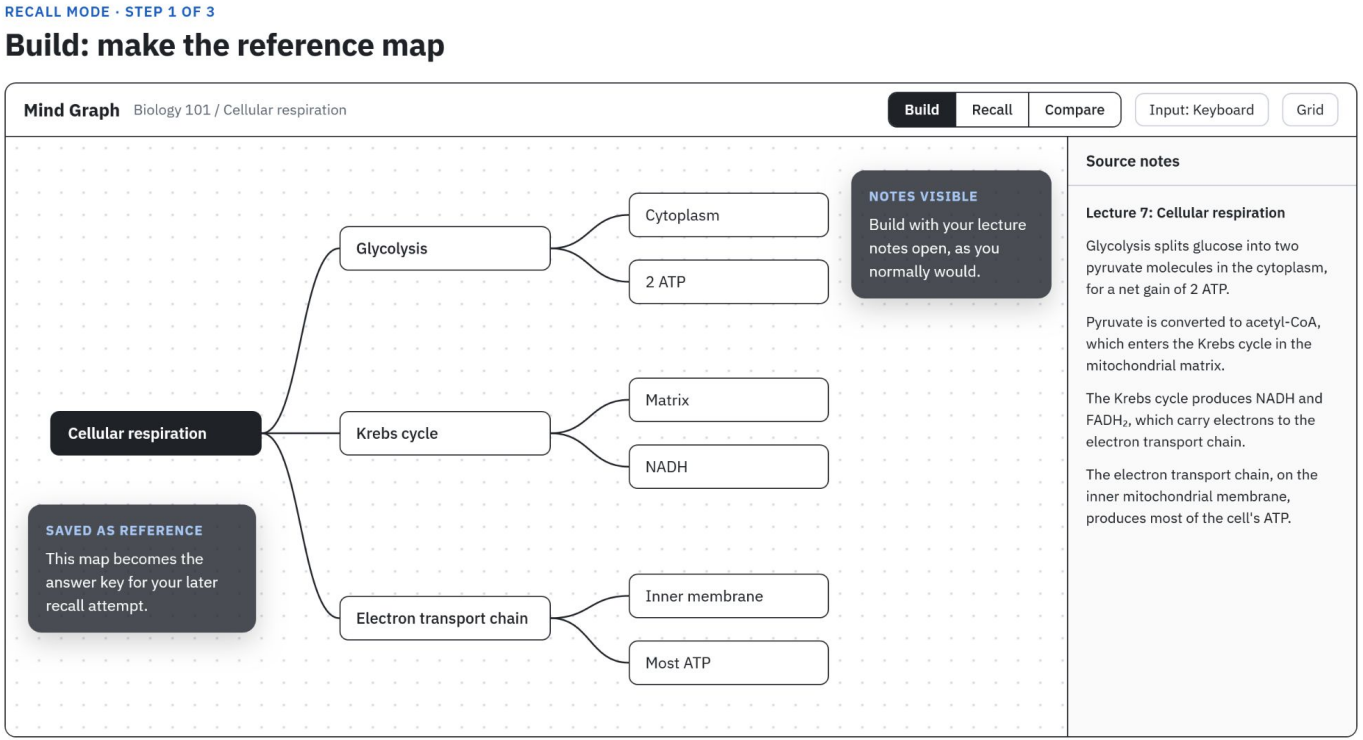

Motivation

- Students may choose suboptimal methods of study, or attempt an optimal method incorrectly
- Drawing concept maps with materials accessible is an elaborative study technique, and gets outperformed by regular recall practice
- What if we had conceptual mapping software with built in recall tools?

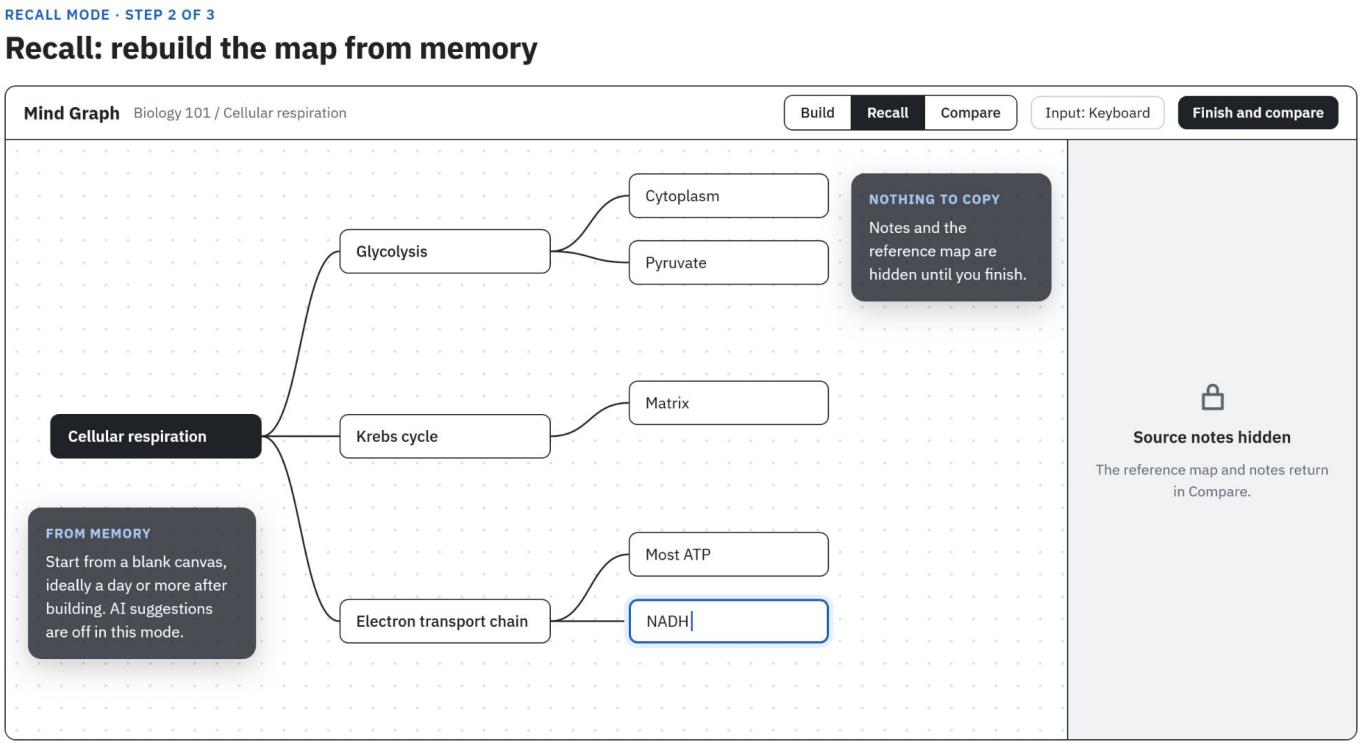

User Requirements

- Make building maps from memory a supported activity
- Show students what they missed after a recall
- Keep the interface out of the way

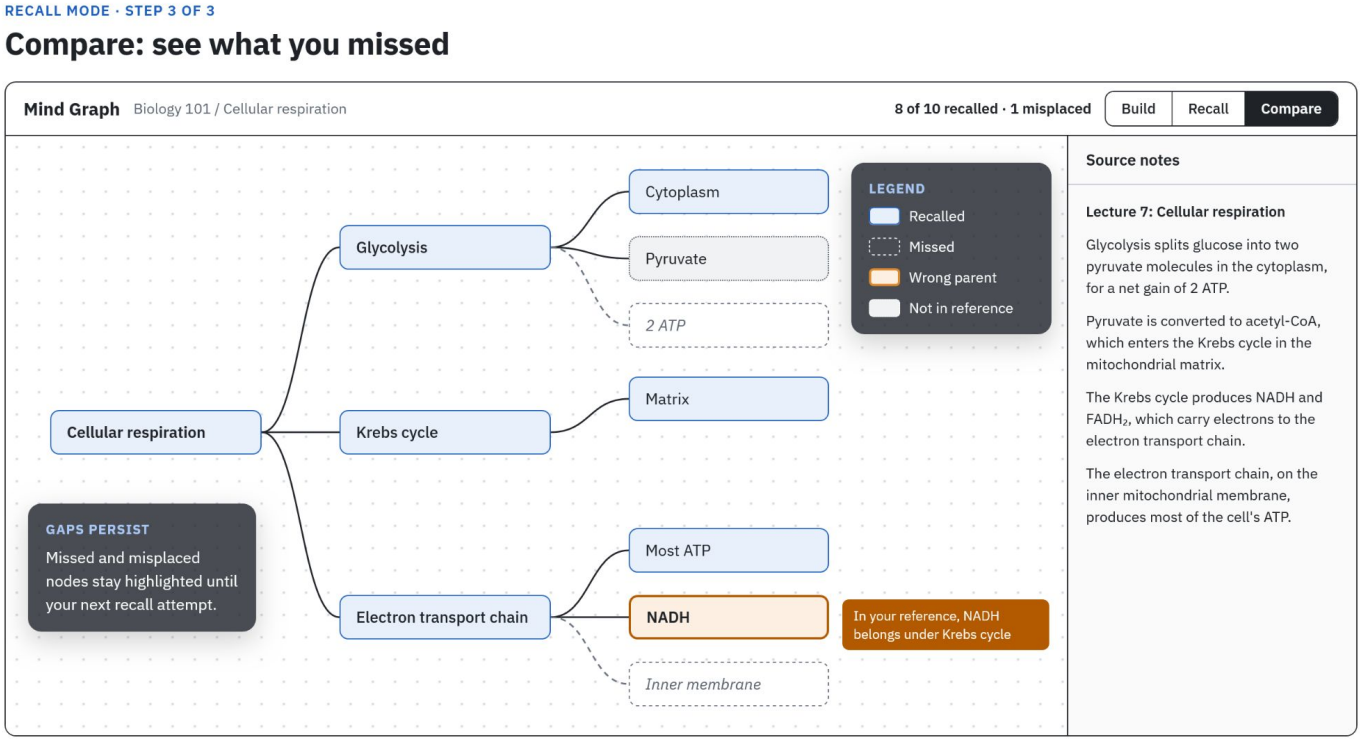

Recall Process: Build

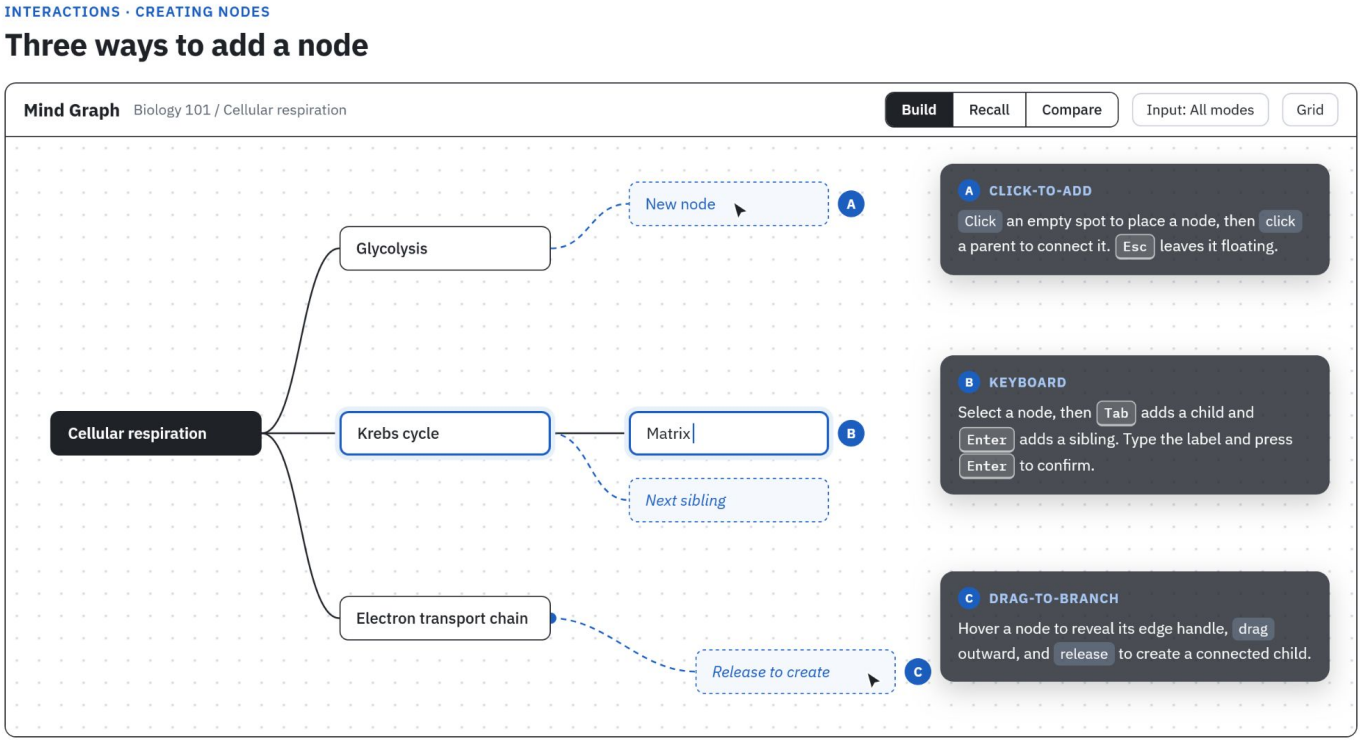

Recall Process: Recall

Recall Process: Compare
